Firmwareupdates

The Netzer has an integrated Bootloader. Hence, firmware updates via network are possible (TFTP is used). No special programming device is needed.

The firmware is constantly under development. New features arrive and bugs will be fixed. The releases are published regularly.

There are two bootloader versions which are fundamentally different.

- **Bootloader 2** expects a so-called IntelHex file as an image. These files can be downloaded from here.
- **Bootloader 4** expects proprietary binary files. Through the special content only original MoBaCon images can be downloaded on this device. These files can not be downloaded, they are published by e-mail for MoBaCon customers only.
