Service packages and licenses

Since version 1.4, it is distinguished between two firmware versions:

- The continuously freely maintained and published version **“base”**,
- As well as the new version **“pro”**, enriched with new and powerful features.

All the projects within a revision are offered both as **base** and **pro** version.

Base license

Installing base projects requires the installed Bootloader 2.

Downloads

Here is the complete download history.

Pro license

The **pro** version is not freely offered, but acquired with a new license. This license may either be individually bought, or it is bought in the shop together with a purchased Netzer.

The source code is not included in the **pro** licence, but can be bought here.

The pro version requires an update to Bootloader 4.

An update to bootloader 4 is sent you by mail or is already installed when buying a pro Netzer from our shop.
